# REMAN SOLUTIONS

## Keeping your machinery up and running

When the components in your Komatsu equipment reach the point of requiring overhaul or replacement, Komatsu Australia can assist in minimising downtime and reducing costs through a wide range of Komatsu Remanufactured (Reman) components.

Our Reman process is carried out under strict guidelines developed by our factory design and manufacturing engineers.

Reman components are built to Komatsu's factory specifications at one of our specialist Reman facilities. The key Reman products include:

- Engines and engine components
- Transmissions
- Power modules
- Final drives
- Hydraulic pumps and motors
- Differentials
- Electric wheel motors and more.

Komatsu Australia's Reman facilities offer major components for a number of machines, including:

- Bulldozers
- Electric Drive Trucks
- Wheel Loaders
- Excavators
- Mechanical Trucks
- Graders

## KOMATSU REMANUFACTURED PARTS

Improved operating costs for the life of your Komatsu machines

Whether you are operating in a quarry, mine or just clearing a site, Komatsu now offers an extensive range of remanufactured major components for your production size machines.

Remanufactured components are designed to keep you running at the lowest total cost and are backed by a Komatsu warranty.

Unlike many OEMs, Komatsu's components are factory remanufactured, not rebuilt or repaired, to meet Komatsu

factory specifications and original equipment quality so that you can be confident you are getting the performance, reliability and durability you have come to expect from your Komatsu machine.

With our pre-failed Flat Rate Pricing you will have certainty in your running cost estimates. So whether you are considering changing out a component or even doing a second-life rebuild on your machine, you can rest assured that Komatsu has the right products at the right price for you.

### Parts Availability

Komatsu has invested millions of dollars in remanufactured parts inventory to ensure that a wide range of parts are available when and where you need them.

The Komatsu branch network provides the peace of mind that Komatsu has the remanufactured components to get your machine back up and running with minimal downtime.

# KOMATSU GENUINE REMANUFACTURED PARTS

## Major component products

### Engines

The Komatsu engine is remanufactured to deliver factory specification power, torque and reliability. This specialised remanufactured component will meet the critical power production and emission requirements for your Komatsu machine. Critical engine software upgrades are also installed along with new bearings, seals, gaskets, piston rings, O-rings and all internal fasteners.

### Transmissions/Torqueflows

Komatsu's unique transmission/torqueflow design delivers industry leading responsiveness, speed and durability. Your Komatsu remanufactured transmission/torqueflow will perform "like-new" to meet the travel requirements for your Komatsu machine. All seals, O-rings, bearings, disc plates and other critical components are replaced with 100% new Komatsu parts.

### Electric Drive Components

Komatsu electric drive components are remanufactured in a controlled environment and rebuilt to factory specifications to ensure your fleet of mining trucks maintains maximum performance. These electric drive components receive critical updates and all internal fasteners, internal cables and gear train bearings are replaced with 100% new Komatsu parts.

### Power Train Modules

The Komatsu Reman power module is built to deliver factory specification power train performance. This specialised remanufactured component will achieve the speed, braking and responsiveness requirements on your Komatsu machine. Critical components like seals, O-rings and bearings are replaced with 100% new Komatsu parts, delivering the latest technology

### Final Drives/Differentials

The Komatsu final drive and differential performs a crucial function within

Komatsu's unique power train system. These specialised remanufactured components efficiently convert torque to traction, allowing your Komatsu machine to travel under the most challenging ground conditions encountered on the job site. All seals, gaskets, bearings, O-rings, crown wheel and pinion are replaced with 100% new Komatsu parts, to ensure durability

### Hydraulic Components/Cylinders

The Komatsu hydraulic pumps, motors and cylinders are remanufactured in a clean-room environment in order to meet strict cleanliness requirements. These specialised remanufactured components perform at extremely tight Komatsu engineering tolerances and high operating pressures and will deliver performance and reliability equal to or better than the original components. All replacement parts include seals, bearings, shafts and critical internal fasteners are replaced with 100% new Komatsu parts.

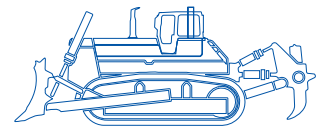

# BULLDOZERS

Major component coverage for D375 to D475 crawler dozers

Machine model	Engine	Powertrain module	Final drive	Starter motor	Turbo	Hydraulic pump
D375A-3	6162-00-3901	195-00-00512	195-27-00414	600-813-7121	6505-52-5540	705-58-44050
